PROFESSIONAL SUMMARY

Full Stack Developer and Applied Mathematics undergraduate with production experience in Next.js, FastAPI, and clinical forecasting models. Specialized in building AI-driven Health Tech applications, optimizing complex data workflows, and developing scalable backend architectures for medical diagnostics and enterprise B2B hospital clients.

PROFESSIONAL EXPERIENCE

Full Stack Developer

Igoko Avionics Solutions Private Limited

Gurugram, India

Jul 2026 – Present

- Spearheaded the end-to-end development of a comprehensive HealthTech web platform, engineering core modules for medical equipment renting and automated patient appointment scheduling.
- Developed and deployed custom SaaS features for enterprise B2B healthcare providers, including Fortis and Muskan Hospital, collaborating directly with sales teams to translate clinical requirements into technical deliverables.
- Architected a scalable testing priority system to handle dynamic hospital workflows and implemented strict data masking protocols to comply with sensitive doctor and patient data-sharing constraints.

PROJECTS

Digital Twin for Sarcopenia Risk Forecasting | [GitHub](#) | *Python, ML, Bayesian*

- Engineered a machine learning "Digital Twin" model utilizing NHANES dataset cycles to forecast Sarcopenia risk, eliminating the clinical need for expensive DXA scans.
- Developed a blood-based "Muscle Quality Proxy" using creatinine, albumin, and uric acid levels to accurately estimate muscle mass.
- Implemented Bayesian methodology using NUTS samplers and non-linear feature engineering to map and capture complex muscle decay curves with quantified uncertainty bounds.

InkSight - NLP-Driven Psychological Testing Platform | [Live Demo](#) | *FastAPI, Next.js, MongoDB*

- Built a decoupled architecture using FastAPI for compute-heavy backend logic and Next.js for responsive client-side rendering, improving separation of concerns.
- Engineered a scalable MongoDB schema with compound indexing for 100+ rule sets, achieving sub-100ms query latency for complex lookups.
- Developed a custom NLP pipeline to parse unstructured patient text and map it to clinical schemas, reducing manual data entry time.

Satya-Check: Multilingual Fake News Detection | [GitHub](#) | *Python, PyTorch, Flask*

- Fine-tuned Google's MuRIL transformer via PyTorch on a native Hindi dataset to bypass transliteration data loss, achieving 99.7% fake news detection accuracy.
- Architected a "Dual-Brain" verification backend in Flask, dynamically cross-referencing AI predictions against trusted media via Google Custom Search API and Sentence Transformers.

ACHIEVEMENTS

EY Techathon 6.0 Participant: Engineered an OCR-driven legal aid platform to digitize, parse, and structure handwritten legal documents, enabling automated status tracking and centralized document retrieval. (*Built with Tesseract OCR*)

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, SQL

Backend: FastAPI, Node.js, Express.js, RESTful APIs

Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS

Databases & Tools: MongoDB (Aggregation/Indexing), Git/GitHub, Postman

DevOps & Cloud: Docker, AWS (EC2)

EDUCATION

Cluster Innovation Center (University of Delhi)

BTech in Information Technology and Mathematical Innovation

New Delhi, India

2024 – 2027
